## SOAPSTONE KITCHENWARE

### CURING YOUR SOAPSTONE KITCHENWARE

After washing your pot with a mild soap and hot water, let dry completely.  
Oil well the complete surface of the stone (in and out); avoid using too much oil since it might create a sticky surface.

Allow enough time for the oil to be absorbed into the stone (24 hrs)

Place Stoneware in cold oven; bring temperature to 350f and bake for 30 min.

Turn oven off; allow the stone to cool.

Repeat process at least once more.

Your stone is now ready to be used.

**Gradual heating and cooling** in the oven is recommended during the first few uses to help strengthen your stone.

When cutting, avoid dragging the utensils across the stone.
